

Module 4 – onChange Client Script

Auto-set Urgency when Impact changes to High

Purpose

Use an onChange Client Script on the Impact field to automatically set Urgency to High when Impact becomes High.

Navigation

Go to System UI → Client Scripts and click New.

Configuration

Name: Auto set urgency for high impact

Table: Incident

Type: onChange

Field name: Impact

Active: true

Script

```
function onChange(control, oldValue, newValue, isLoading) {  
    if (isLoading || newValue == '') {  
        return;  
    }  
  
    if (newValue == '1') {  
        g_form.setValue('urgency', '1');  
        g_form.addInfoMessage(  
            'Urgency set to High for High impact incident.'  
        );  
    }  
}
```

Verification

Open an Incident form and change Impact to High. The Urgency field should automatically change to High and an information message should appear.

Key API

`g_form.setValue()` changes a field value on the client side. `g_form.addInfoMessage()` displays an informational message to the user.
