

Module 5 – onSubmit Client Script

Prevent saving a High Impact Incident when Assigned To is empty

Purpose

Use an onSubmit Client Script to validate the Incident before it is saved. If Impact is High and Assigned To is empty, the submission is blocked.

Configuration

Name: Prevent save if Assigned To missing

Table: Incident

Type: onSubmit

Active: true

Script

```
function onSubmit() {  
    if (g_form.getValue('impact') == '1' &&  
        g_form.getValue('assigned_to') == '') {  
  
        g_form.showErrorMessage(  
            'assigned_to',  
            'Assigned To is mandatory for High impact incidents.'  
        );  
  
        return false;  
    }  
  
    return true;  
}
```

Verification

Create or open an Incident, set Impact to High, leave Assigned To empty, and click Submit. The record should not be saved and an error should be displayed.

Select a valid user in Assigned To and submit again. The record should save successfully.

Key API

`g_form.getValue()` reads a field value. `g_form.showErrorMessage()` displays a field-level error. Returning false from `onSubmit` prevents the form from being submitted.
